

The SA-A is a multi-sower designed for planting of all crops of thick (beans, soybeans, corn, sunflower...) and thin (oats, wheat, rye, canola, pasture...) grains. Strength, versatility and precision are exclusive characteristics that serve the plantation needs and the requirements for an excellent job.

Fertilizer Feeder Mechanism: mechanical carrier rotor type feeder with self-cleaning milimetric adjustment, initiated by worm screw.

Optional: thin grains 3rd box for low dose distribution (pasture – small seeds)

Fertilizer tank: modulated, made in low-density anticorrosive structural polyethylene.

Operation Access Platform: rear platform providing perfect operation and supply conditions.

Seed Tank: polyethylene bucket type for thick grains, with 25(kg)/31(l) per row.

Transmission Relation: Through a combination of sprocket wheels, with changing option through the comb wheels side affixed. The transmission has shielded bearings to provide greater security and durability.

Seed Feeder Mechanism: mechanical feeder through slotted rotor with continuous flow system for both thin and thick seeds.

Seed Sowing: The seed sowing system is through two mismatched disks mounted in "V" shape with 13"x14".

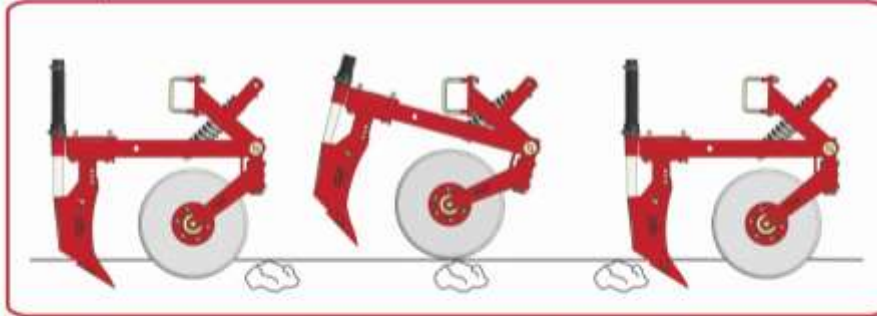

Seed Tank: (thin grains) the seed tank is made in steel metal.

Limiting Ring Option: for the double disc (rice).

SUMMER

Feeling the need of several producers who cultivate rocky lands, VENCE TUDO developed the most efficient penetration and ground attack system. Baptized and patented "Stone Jumper", a simple name which exemplifies in a practical way its essential operation to a uniform and much more efficient planting, ensuring better germination and significantly avoiding breaks and stops, common in these soil situations, reducing time and costs in the plantation process.

Option: Cover disc system for closing the furrow, with a plantation furrow compactor and limiting 3rd wheel.

Cover Mechanism: A set of two seed depth limiting wheels in "V" shape, with a plantation furrow compactor 3rd wheel.

Option: Iron wheel system in "V" shape for seed depth limiting with adjustable angle for closing the furrow, with a plantation furrow compactor 3rd wheel.

Option: Iron wheel system in "V" shape for limiting the seed depth with adjustable angle for closing the plantation furrow.

WINTER

Cover Mechanism: Seed cover and depth limiting mechanism through a single rubber wheel providing a perfect cover.
